SUMMARY

Full-stack engineer and founder of Factory.ng, a venture studio building digital infrastructure for African markets. Solo engineer across 4 live products spanning EdTech, CleanTech, and security — owning every layer from database schema and API design to frontend architecture and production deployment. Open to remote global roles in full-stack or backend engineering.

EXPERIENCE

Founder & Engineer · Factory.ng

Jan 2024 – Present · Lagos, Nigeria (Remote)

- Founded and sole-engineer a venture studio building digital infrastructure for African markets — 4 live products shipped across EdTech, CleanTech, and security.
- Built EduFlows, a multi-tenant school SaaS (Next.js, NestJS, Supabase, Prisma) with strict per-tenant data isolation across schema, API, and storage layers.
- Designed Energy Flow OS, a VPP platform with NEPA-aware telemetry (MQTT, TimescaleDB) and a Modbus/RS485 edge gateway for mixed-brand residential solar.
- Built and audited PwmngerTS, an open-source zero-knowledge password manager; resolved critical security issues including token leakage in API responses, stored XSS in browser extension, broken HKDF salt, and missing rate limiting.
- Architected a Turborepo monorepo with shared auth, database, billing, and UI packages across all studio products.

Frontend Engineer · O3 Finance School

May 2025 – Present · Lagos, Nigeria

- Build and maintain production features using Next.js, TypeScript, and Tailwind CSS.
- Deployed EduFlows at this school as part of the Factory.ng pilot programme, gathering direct feedback from teachers and administrators in the field.

Web Developer · Flincap

Aug 2023 – Jan 2024 · Lagos, Nigeria

- Developed and maintained client-facing websites using HTML, CSS, Sass, and JavaScript.
- Tested across browsers and devices; communicated directly with clients on project progress and deliverables.

SELECTED PROJECTS

EduFlows — Multi-tenant school management SaaS for Nigerian private schools. Covers fee collection, results management, timetabling, and AI-assisted curriculum planning (NERDC framework). Stack: Next.js, NestJS, Supabase, Prisma, PostgreSQL, Paystack.

Energy Flow OS — Virtual power plant platform for Nigerian residential solar market. Real-time telemetry via MQTT/TimescaleDB, Modbus/RS485 hardware gateway, five-rule VPP dispatch engine with NEPA-aware logic. Stack: Next.js, NestJS, TimescaleDB, MQTT, Raspberry Pi edge agents.

PwmngerTS — Open-source zero-knowledge password manager — all encryption happens client-side. Includes a browser extension and full security audit remediation. Stack: TypeScript, Node.js, Web Crypto API, Docker.

Omoluabi — Yorùbá language learning platform with gamified lessons and community-driven content. Stack: React, TypeScript, NestJS, Supabase.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, SQL

Backend: NestJS, Node.js, REST APIs, WebSockets, MQTT

Infra: Vercel, Docker, Turborepo, GitHub Actions

Frontend: React, Next.js, Tailwind CSS, Zustand

Databases: PostgreSQL, Supabase, Prisma, TimescaleDB

Other: Modbus/RS485, Web Crypto API, RLS, NDPA 2023

EDUCATION

B.Sc. Materials Science and Engineering · University (Nigeria)

May 2016 – Dec 2021

Web Development Bootcamp · Self-directed / Udemy

Nov 2018 – Jun 2019
